This information guide contains general responses to common concerns about ownership of rights in research data. It may be necessary to consult specialist resources to answer more specific questions about research data. This guide complements other information guides on Making Research Data Available, Frequently Asked Questions: Using Research Data and Choosing a Licence for Research Data. A Glossary is available to explain certain terms used in this information guide.

When is research data protected?

Research data are likely to be a ‘bundle’ of different types of information and content, sourced from third parties, or created by the researcher. Research data may be factual and/or creative.

Data as such, like facts, principles, mathematical concepts and methods are not protected by copyright. However, there are cases in which data, not as such but part of collections, can be protected. Additionally, whereas data as such are not protected by copyright, that does not mean data are not protected by other laws (e.g. confidential information or personal data). This guide will offer guidance in this area with a specific focus on research data.

This information guide will focus on those elements of research data that, in the UK, might be automatically protected by intellectual property rights such as copyright protected works and databases protected by copyright and/or the Sui Generis Database Right (SGDR).

---

1 Agreement on Trade-Related Aspects of Intellectual Property Rights, WTO, Article 9
How does rules on research data impact on use?

Research data may be:
- Automatically protected by the law;
- Regulated by contract.

Multiple types of protection might exist in research data, or there may be elements that have no legal protection.

As explained in this information guide, the default position is that the owners of protected rights can restrict the use of those rights.

**Licensing** is a way to stipulate when and how protected rights in research data can be used by others. Our information guides on *Making Research Data Available* and *Choosing a Licence for Research Data* provide further information on how to make research data available through licensing.

Our information guide on *Using Research Data* explores some of the concepts that are important when thinking about using data created by another researcher.

Before thinking about licensing or using research data, it is important to understand the rights that can arise automatically in the UK in research data. The rest of this guide will discuss copyright and the database right.

1. **Sui Generis Database Right** *(SGDR)*

   For legal purposes, a ‘database’ means “a collection of independent works, data or other materials arranged in a systematic or..."
methodical way and individually accessible by electronic or other means.”

Databases are not automatically protected by law unless:

(1) the selection or arrangement of the contents are the author’s own intellectual creation – in which case copyright protection applies to the structure of the database; or

(2) they qualify for a special IP right (called the sui generis database right (SGDR)) because there has been a substantial investment in obtaining, verifying or presenting the contents of a database (e.g. a database of poetry titles).

The content of a database can also be composed of copyright protected works in the first place, such as a database of scholarly articles. However in this case it is not the copyright in the database that extends to the content, there are simply two independent copyrights in the same database: the copyright in the database structure if it is sufficiently original, and the (independent) copyright in the element constituting the database. In addition there also may be a SGDR right in the substantial investment in the database. The latter protects the database from substantial extractions, therefore effectively offering a form of protection to data that would otherwise not be protected.

The SGDR applies in the EU for 15 years (renewable if further substantial investment in the database).

Who owns SGDR?

SGDR is owned by the maker of the database, which is usually the person or entity who bears the financial risk.

Financial risk in academic research
In academic research the financial risk of projects is usually borne by the funder or institution (an institution’s insurance cover might provide backing for unfunded research projects). It is therefore possible that the SGDR in a database produced during research may be owned by the funder or institution, even where copyright arising in the database may be owned by the researcher. However, contracts among the different parties (funders, universities, researchers, etc) may provide differently.

It is important to check the terms of any funding or collaboration agreement to see whether ownership of the deliverables is specified.

What can SGDR owners do?

The SGDR will protect a database from extraction (copying) of substantial amount of data, or repeated extraction of insubstantial amount, therefore effectively extending protection to the data.

How long does SGDR last?

2 Courts have distinguished ‘obtaining’ (recording existing data such as the number of goals at a football match) from ‘creating’ data (e.g. creating football fixture lists). The latter do not qualify for SGDR protection.
Rights in Databases

Research data

Database

Legally protected database

Original Structure or Arrangement (e.g. Yellow Pages)

- Copyright protection
  - Owned by author
  - licensable

Original Copyright protected Works in Database (e.g. collection of photographs)

- Copyright protection
  - Owned by author
  - licensable

‘Substantial Investment’ in obtaining, verifying or presenting data’

- SGDR
  - Owned by maker
  - licensable

Unprotected database
2. Copyright law

Copyright protection arises automatically. The UK requires works to be fixed (expressed or recorded in some way) before they are protected.

Original literary, musical, dramatic and artistic works may be protected by copyright law. Certain non-original works such as the typographical arrangement of published editions, sound recordings, broadcasts, and films are also protected by copyright. The structure of databases can also be protected by copyright – see the next section for more detail.

Copyright law does not protect ideas that are not expressed in an original form of expression – for example, recipes and magic tricks. There is no requirement to use the © symbol in the UK, although this is common practice.

Copyright law grants the owner the exclusive right to control certain rights such as reproduction, redistribution, communication to the public etc.

Who owns copyright?

<table>
<thead>
<tr>
<th>Type of work</th>
<th>Default* Owner</th>
</tr>
</thead>
<tbody>
<tr>
<td>Literary</td>
<td>Author</td>
</tr>
<tr>
<td>Musical</td>
<td>Author</td>
</tr>
<tr>
<td>Dramatic</td>
<td>Author</td>
</tr>
<tr>
<td>Artistic</td>
<td>Author</td>
</tr>
<tr>
<td>Database</td>
<td>Author</td>
</tr>
</tbody>
</table>

*Can be varied by contract

The author is usually the person creating the work, but if the work is created jointly, it may be jointly owned, and if a work is created by someone in the course of a contract of employment it may be owned by the employer (depending on the contract).

Copyright ownership in academic institutions
Copyright ownership in the contracts of employees and researchers working for academic institutions often vary the statutory rule that an employer owns its employees copyright. It is essential to check the employment contract and the Intellectual Property Policy of an institution to understand who owns copyright. Practice can vary from institution to institution.

How long does copyright last?

In the UK, as well as EU countries, copyright protection lasts for:

<table>
<thead>
<tr>
<th>Type of work</th>
<th>Length of copyright protection</th>
</tr>
</thead>
<tbody>
<tr>
<td>Literary</td>
<td>Lifetime of Author plus 70 years**</td>
</tr>
<tr>
<td>Musical</td>
<td>Lifetime of Author plus 70 years</td>
</tr>
<tr>
<td>Dramatic</td>
<td>Lifetime of Author plus 70 years</td>
</tr>
<tr>
<td>Artistic</td>
<td>Lifetime of Author plus 70 years</td>
</tr>
<tr>
<td>Database</td>
<td>Lifetime of Author plus 70 years</td>
</tr>
<tr>
<td>Sound Recording</td>
<td>50 years from date of recording/publication</td>
</tr>
</tbody>
</table>

---

3. A dramatic work must be capable of being communicated in motion – e.g. a choreographed dance
4. Copyright in the recording of the film is protected separately from the dramatic work being filmed.
5. These are called ‘related rights’ in international copyright law.
<table>
<thead>
<tr>
<th><strong>Film</strong>(^6)</th>
<th>Lifetime of the last to die of the Principal Director/Screenplay Writer/Composer plus 70 years</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Broadcast</strong></td>
<td>50 years from first broadcast</td>
</tr>
<tr>
<td><strong>Typographical arrangement</strong></td>
<td>25 years from publication</td>
</tr>
</tbody>
</table>

**i.e. where the author died before 1948**

After expiry of these periods, the work enters the **public domain**.

---

\(^6\) The film recording is protected separately from any copyright in the dramatic work being filmed. The film script might also attract literary copyright. The idea, characters and title of a film are usually not protected.
What can copyright owners do?

You can read more about copyright at CopyrightUser.org.

Copyright owners have rights to restrict certain acts in relation to the protected work such as copying, distributing and communicating the work to the public. The effect is that in most instances use of copyright protected works requires permission from the owner.

Moral rights are additional rights in copyright works. These give the original author of a copyright work the right to:
- be attributed as the author
- protect the integrity of the work (i.e. to object to alteration or derogatory treatment of the work).
- Object to false attribution; and
- Privacy in certain (personal) photographs and films.

Moral rights can be waived but they cannot be transferred.

Where moral rights arise in original copyright protected works, these rights belong to the original author and cannot be transferred although they can be waived.

Using copyright protected works

In the EU, there is no concept of ‘fair use’ of works protected by copyright (or SGDR).

There are some limited exceptions which permit use of protected copyright works in scenarios such as:
- Fair dealing for quotation, criticism and review
- Fair dealing for parody & pastiche
- Fair dealing for news reporting
- Fair dealing for research & private study
- Non-commercial text and data mining
- Disability enablement

Libraries, museums, galleries and archives and other education institutions also benefit from some limited exceptions. You can read more about copyright exceptions at CopyrightUser.org.

If an exception does not apply, then permission is required. However, an owner may grant a standard permission using a licence.

Depending on the type of licence, free use of the research data may be permitted, allowing for use/re-use or re-mixing. Other research data may be subject to certain conditions such as attribution of the original research data owner, or attribution of the owners of other rights in the research data. More restrictive licences may prevent using the research data for commercial purposes or not altering the research data.

If the research data does not specify a licence, it is necessary to consider whether use of any protected content within the research data would infringe the rights of anyone.

Using research data globally?

Although copyright principles apply in most countries, there are variations and the law in force should always be researched.

Orphan Works

Copyright works where ownership is unknown or where the owner cannot be found are often called ‘orphan works’. This does not
mean they can be freely used. The UK government operates an Orphan Works Register and provides a scheme for licensing orphan works.
